WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut one 453 mm length of 25 x 25 x 2 tube; ends square
within 0.5 mm (use a mitre box), deburred inside and out.
Mark the bottom end. All four holes go through both side walls,
on the centre line of one pair of faces (the side faces):
two 5.5 mm holes 15 and 40 mm up from the bottom (foot angles);
two 5.5 mm holes 45 and 85 mm down from the top (corner plates).
Drill from one side through both walls in a drill stand so the
holes run straight; check a bolt passes freely.
The length sets the camera height: 453 mm puts the lens
440 mm above the mat with an 18 mm board and 4 mm mat.
Fit: stands on the board between the foot angles; the arm butts its
front face; the cable runs up its back face.
Check: length within 0.5 mm; ends square; four holes line up.
